

## **Thank you for your purchase!**

The character controller includes an installer which will verify that your environment meets the necessary requirements. If the installer does not automatically open you can open it manually by going to Tools -> Opsive -> Ultimate Character Controller -> Installer.

After the character controller has been installed you can find the quick start guide at Assets/Opsive/UltimateCharacterController/QuickStart.pdf.

All of the documentation can be found [online](#). If you have any questions you can reach us on the [forum](#) or via email at [support@opsive.com](mailto:support@opsive.com).

We look forward to seeing what you create with our controller!
